# Document Control

| Version | Date      | Prepared By  | Change Description                            |
|---------|-----------|--------------|-----------------------------------------------|
| 0       | June 2026 | Pratha Khare | Initial Jira-ready issue and testing document |

Document reference: PB-TAR-PRK-001. This document is prepared from the supplied ParaBank Eclipse project, its TestNG suite and the latest available execution artifacts.

## 1. Executive Summary

The latest available ParaBank TestNG execution completed six automated tests with six reported passes, zero failures and zero skips. The suite duration was approximately 69.32 seconds. The reported pass rate is 100%.

A code-quality review identified important assurance gaps: RegistrationTest has no final assertion and TransferFundsTest uses an unconditional Assert.assertTrue(true). Therefore, the execution is technically green, but the effective business confidence is lower than the numerical pass rate suggests.

## 2. Execution Overview

| Metric             | Result                    |
|--------------------|---------------------------|
| Execution Date     | 14 June 2026              |
| Suite              | ParaBank Automation Suite |
| Total Tests        | 6                         |
| Passed             | 6                         |
| Failed             | 0                         |
| Skipped            | 0                         |
| Reported Pass Rate | 100%                      |
| Suite Duration     | 69.320 seconds            |
| Tester             | Pratha Khare              |

## 3. Test Result Breakdown

| Test Method         | Module           | Status | Duration | Analysis                          |
|---------------------|------------------|--------|----------|-----------------------------------|
| registerUser        | Registration     | PASS   | 6.183 s  | No explicit final assertion       |
| loginTest           | Login            | PASS   | 3.719 s  | Homepage assertion present        |
| createAccount       | Open Account     | PASS   | 3.371 s  | Creation assertion present        |
| accountOverviewTest | Account Overview | PASS   | 2.667 s  | Overview assertion present        |
| transferFundsTest   | Transfer Funds   | PASS   | 7.400 s  | Uses unconditional true assertion |
| billPayTest         | Bill Payment     | PASS   | 9.460 s  | Confirmation assertion present    |

## 4. Coverage Analysis

| Requirement Area | Covered | Validation Strength | Gap                                        |
|------------------|---------|---------------------|--------------------------------------------|
| Registration     | Yes     | Low                 | No assertion verifies registration success |
| Login            | Yes     | Medium              | Uses fixed wait and prints password        |

| Requirement Area            | Covered | Validation Strength | Gap                                 |
|-----------------------------|---------|---------------------|-------------------------------------|
| Open Account                | Yes     | Medium              | Positive path only                  |
| Account Overview            | Yes     | Medium              | Only page-level verification        |
| Transfer Funds              | Yes     | Very Low            | No actual transfer verification     |
| Bill Payment                | Yes     | Medium              | Single Excel row and fixed wait     |
| Negative Login              | No      | None                | Missing from current Pratha suite   |
| Invalid Transfer / Bill Pay | No      | None                | Negative validation not implemented |

5. Quality Indicators

| Indicator              | Assessment        | Comment                                                                    |
|------------------------|-------------------|----------------------------------------------------------------------------|
| Execution Stability    | Good              | All six tests completed in the captured run                                |
| Functional Coverage    | Moderate          | Six core positive banking workflows covered                                |
| Assertion Quality      | Needs Improvement | Two tests do not provide reliable business validation                      |
| Test Independence      | Low               | Login credentials are generated by registration and reused                 |
| Data-Driven Capability | Good              | Excel is used for login, transfer and bill-pay data                        |
| Reporting              | Good              | Extent, TestNG and screenshot support available                            |
| CI/CD Readiness        | Moderate          | Jenkins and Docker files exist; configuration alignment should be reviewed |
| Security Hygiene       | Needs Improvement | Password is printed in console                                             |

6. Defect and Risk Summary

| ID          | Finding                                                          | Type               | Severity | Recommended Jira Action                               |
|-------------|------------------------------------------------------------------|--------------------|----------|-------------------------------------------------------|
| PB-AUTO-101 | Transfer test always passes because assertion is hard-coded true | Automation Defect  | Critical | Create bug and block sign-off for transfer validation |
| PB-AUTO-102 | Registration test lacks a success assertion                      | Automation Defect  | High     | Add confirmation assertion                            |
| PB-SEC-103  | Login password is written to console output                      | Security / Logging | High     | Remove or mask sensitive data                         |
| PB-AUTO-104 | Fixed Thread.sleep used in multiple tests                        | Reliability        | Medium   | Replace with explicit waits                           |
| PB-AUTO-105 | ExtentTest field is shared and not parallel-safe                 | Framework Risk     | Medium   | Use ThreadLocal before enabling parallel execution    |

7. Root-Cause Themes

- Assertions are inconsistent across modules, causing possible false positives.
- Test methods mix business actions, test-data retrieval and synchronization logic.
- The suite depends on previously generated credentials, reducing independence.
- Fixed waits increase runtime and may not handle slow environments reliably.
- Console output includes sensitive test data and should be sanitized.

8. Recommendations

| Priority | Recommendation                                                                                                              |
|----------|-----------------------------------------------------------------------------------------------------------------------------|
| High     | Replace Assert.assertTrue(true) with verification of transfer confirmation, source account, destination account and amount. |

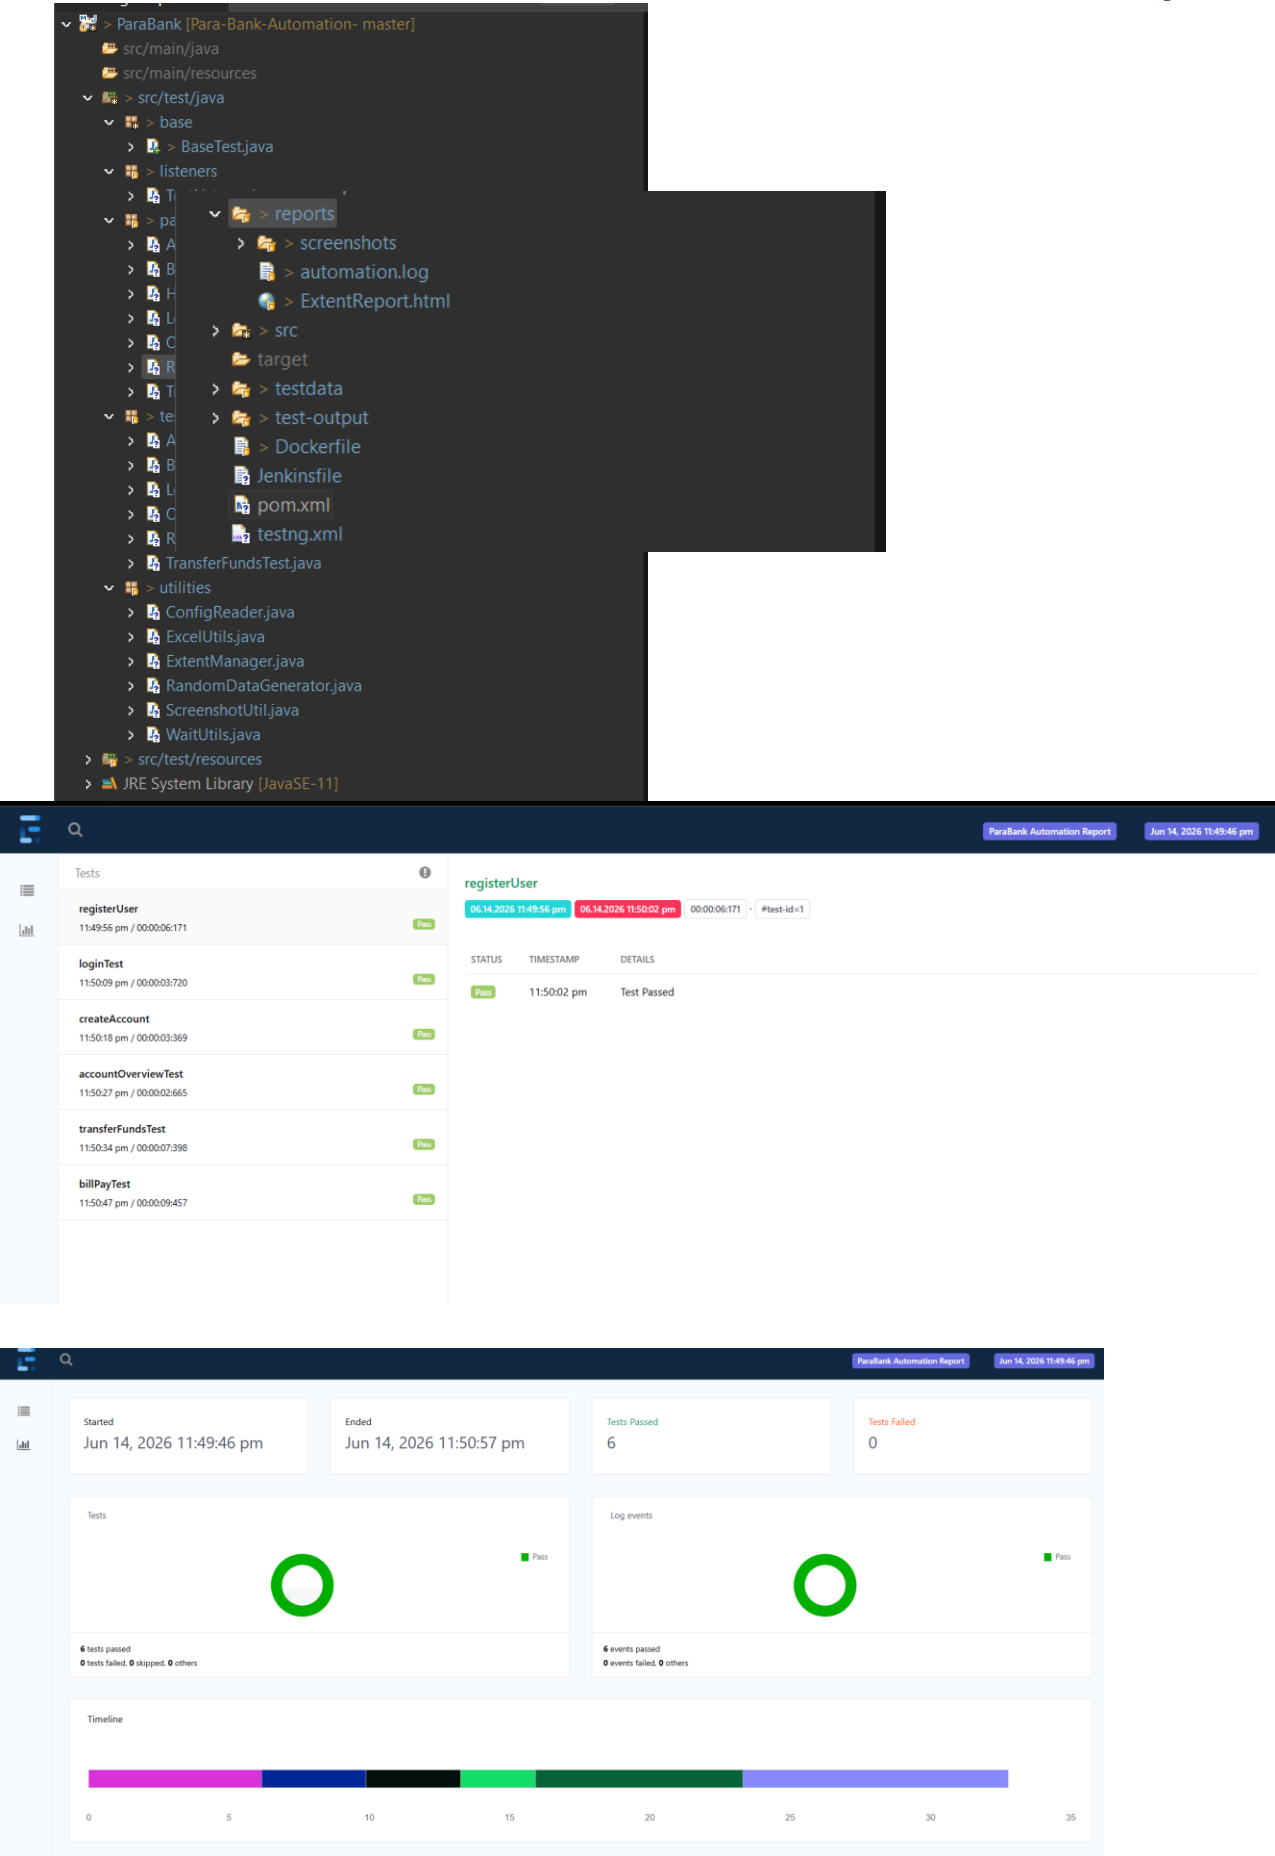

| Priority | Recommendation                                                                 |
|----------|--------------------------------------------------------------------------------|
| High     | Add a registration-success assertion before writing credentials to Excel.      |
| High     | Remove password printing from LoginTest and any CI logs.                       |
| Medium   | Replace Thread.sleep with WebDriverWait conditions.                            |
| Medium   | Add negative login, invalid transfer amount and bill-pay validation scenarios. |
| Medium   | Introduce independent setup or API-based test-data creation where possible.    |
| Medium   | Use ThreadLocal<ExtentTest> before enabling parallel TestNG execution.         |
| Medium   | Align Java versions between pom.xml, Jenkins tools and Docker image.           |

## 9. Release Readiness Decision

Decision: Conditional approval for demonstration purposes only. The framework demonstrates end-to-end automation successfully, but transfer validation and registration validation must be corrected before the suite is used as release-quality evidence.

## 10. Conclusion

The project provides a solid Page Object Model foundation, Excel data handling, reporting and CI/CD assets. The next improvement cycle should focus on assertion quality, synchronization, negative coverage and secure logging. Once the Critical and High Jira items are resolved, the framework will provide significantly stronger regression confidence.
